SkyAir

About Daikin

Daikin has a worldwide reputation based on nearly 90 years' experience in the successful manufacture of high quality air conditioning equipment for industrial, commercial and residential use and 55 years as a leader in heat pump technology.

Daikin quality

Daikin's much envied quality quite simply stems from the close attention paid to design, production and testing as well as aftersales support. To this end, every component is carefully selected and rigorously tested to verify its contribution to product quality and reliability.

Heat pump technology

Air to air heat pumps obtain 80% of their output energy from renewable sources: the ambient air, which is both renewable and inexhaustible*. Of course, heat pumps also require electricity to run the system, but increasingly this electricity can also be generated from renewable energy sources (solar energy, wind energy, hydropower, biomass).

* EU objective COM (2008)/30

Benefits for building owners

Daikin solutions provide market-leading systems that are ahead of the latest legislation for energy savings and carbon emissions. Delivering a consistent high performance throughout the product's lifespan, the Sky Air range contains operational features that deliver the very highest seasonal efficiencies on the market while the advanced controls and monitoring features allow the delivery of optimal comfort levels with the minimum of costs.

These features provide the following benefits for Building Owners:

- Your climate control system will meet legal requirements well beyond the current legislation
- You will obtain optimal seasonal performance thus saving energy and so reducing costs
- The climate control system will add value to the building thus protecting your investment
- You will save on installation and running costs, obtain rapid return on investment, and contribute to ecological protection objectives

Benefits for installers

Our systems have been designed to provide for an easy transition from existing units to the technologically advanced units that offer far higher energy efficiency solutions. With new compressors, heat exchangers and control systems available for installers to recommend and utilise in system upgrades to meet future regulations, the Sky Air series has been developed with the installer and his client in mind enabling him to provide much more than just an installation service. In reality, Sky Air offers the installer a competitive advantage by being able to recommend an extended 3-phase range, enhanced controllers and optical detection tools that all help deliver optimal performance, high seasonal efficiency, low ecological impact and significant cost savings.

These features provide the following benefits for Installers:

- Modular designs and factory fitted extras make installation easier to achieve

Benefits for consultant and design offices

Daikin has a long history of working closely with the consultants and design offices that recommend our equipment to deliver future-ready systems that meet the requirements of both the buildings and the legislation. Our systems are designed to meet the toughest of energy-efficiency, fiscal and compliance issues to allow flexibility for consultants and design offices in delivering absolute comfort in the most efficient manner, while our tools allow them to maximize building performance. The new Daikin Seasonal Smart system, with its adjustable condensing and evaporating temperatures, is a classic example of thinking ahead to ensure performance.

These features provide the following benefits for Consultants and Design Offices:

- You will have the confidence of knowing that you can recommend the right climate control systems to meet tomorrow's legislation
- You will have systems that are designed to blend into any décor and yet provide optimal performance with top seasonal efficiencies
- You will have access to innovative technology to maximize the climate control performance of the entire building
- Your credentials as an eco-conscious consultant and designer will be enhanced

SkyAir the solution for the light commercial sector

Sky Air is Daikin's industry-leading light commercial range, which has been redesigned for optimum seasonal energy efficiency ahead of the latest legislation. Providing the ideal solution for all kinds of small commercial spaces, the Sky Air series offers a complete comfort solution that puts you in total control of your heating and cooling, ventilation and air curtains.

Heating and cooling

Using highly **efficient heat pumps**, Sky Air solutions offer year round comfort:

- All systems now optimised for seasonal energy efficiency.
- A heat pump system can be combined with an outdoor unit powering several indoor units.
 - For a long or irregularly shaped room you can use up to four indoor units linked a single outdoor unit. All the indoor units are controlled at the same time.
 - Air conditioning is available in every room: a multi system allows up to nine different indoor units to operate from a single outdoor unit. All the indoor units can be individually controlled and do not need to be installed at the same time. Extra units can be added later.
- Select from a wide range of indoor units: wall and floor mounted, concealed or ceiling mounted.
- Very quiet and draught-free operation.
- Ideal for both new build and refurbishment projects.

Biddle air curtains for entrances

Biddle air curtains can be used with the Sky Air system to provide heating at building entrances.

Daikin Sky Air can be used with Biddle air curtains to provide heating at building entrances:

- Ideal for buildings with open-door policy such as retail stores.
- Year round climate control and comfort even on the most demanding days.

User-friendly controls

Our **user friendly controls** allows you to manage your Sky Air system for maximum efficiency:

- From individualised unit control to centralised management via touch-screen options and code based controllers, we put you in command at all times.
- The wired remote controller gives full access to the unit's functions and energy saving features, including indication of kWh usage and flexible scheduling for different seasons.
- The DIII-net connection is now standard on most units, allowing you to link into the wider building management system.
- Text based remote control and monitoring of the entire building is available via the internet.

Ventilation

Daikin's **ventilation** option provides a supply of fresh air to help create a healthy and high-quality indoor environment:

- Heat is reclaimed between outdoor and indoor air.
- The fresh air from the ventilation provides additional cooling virtually free.
- Optimum humidity control.

SkyAir the solution for the light commercial sector

Sky Air for retailers

- Creates an inviting atmosphere for your customers.
- Discreet with limited visual and operating impact.
- Reduces energy usage and costs.
- Worry-free installation.

Our **round flow cassettes** blend with your décor as they are **integrated in the ceiling** with only the standard panel visible. This standard panel is the secret to **increasing comfort levels** and providing the **perfect climate conditions** for your customers as the various flaps can be individually opened and closed to ensure that the heating and cooling are directed to where they are needed.

The standard panel is also the secret to reducing maintenance as it conceals the **auto cleaning function** that traps dust with a special filter that cleans itself once a day, while the collected dust can be easily removed with a vacuum cleaner. Up to 50% energy can be saved!

Managing this system couldn't be easier as our intelligent touch controller enables you to **monitor and control** the system directly or via the Internet. It can also be set to provide easy management of your electricity consumption and can even control the lighting, while enhanced scheduling will make your life easier.

Sky Air for offices and banks

The **fully flat cassette** is unique in the market thanks to its remarkable blend of **iconic design and engineering excellence**.

Blending seamlessly with the décor of a modern office and meeting the demanding criteria of architects, the fully flat cassette totally integrates within a standard European ceiling panel, enabling lights, speakers and sprinklers to be installed in the adjoining ceiling tiles.

These units are ideal for heating or cooling smaller areas such as meeting rooms, together with our round flow cassettes. Both can be combined with presence and floor sensors and even with our ventilation option, to optimise the energy efficiency and provide perfect comfort. The **presence sensor** adjusts the set point or switches the unit off when there is nobody in the room but when someone is there, the air-flow is directed away from that person to avoid draught. This combined process has been found to reduce energy usage. The **floor sensor** detects the average temperature near the floor and ensures an even temperature distribution between ceiling and floor. Cold feet become history!

Daikin's **ventilation** option provides a supply of fresh air to help create a healthy and high-quality indoor environment.

Using the KNX interface to connect your Sky Air system to the **building management** system allows central monitoring and control of several devices, including lights, shutters, and climate control systems as to maximize energy efficiency.

Sky Air for server rooms

- Continuous cooling operation.
 - Automatic rotation between active units.
 - Backup outdoor unit ensures continuous operation.
 - Possible to block certain settings.
- Quality products.

Servers, especially racks of servers, generate a great deal of heat and this needs to be removed through **continuous cooling and humidity control**. This presents special challenges that the Sky Air system easily meets with its special server room configuration. Each server room is fitted with two indoor units each connected to a single outdoor unit to ensure that if one outdoor unit fails, the other is there as an **automatic back up**. The indoor units are configured for constant cooling and duty rotation. This is achieved through **automatic switching between units** after certain period of use to ensure that at any time one unit is working while the other is available for maintenance.

Given the critical importance of continuous cooling for server rooms, the system is managed via an RTD-NET controller that can monitor and control up to 16 indoor units either directly or via the building management system and has a '**control of duty**' unit that locks the server room settings so that they cannot be changed by people in the server room.

Sky Air for restaurants

- Creates the perfect dining environment.
- Ensures an even temperature distribution to provide optimal comfort for your guests.
- Highly energy efficient.
- Uses intelligent control systems operated from one central location.

Nothing should distract diners from enjoying the **perfect ambience** and that ambience includes the **optimal temperature**. That's exactly what Daikin's concealed ceiling units deliver through whisper-quiet operation and improved comfort from the 3-step air flow control and these turn your restaurant into a comfortable, welcoming environment for your customers. And with the **centralised control** and easy scheduling for the entire restaurant system, **energy use** is minimised to control your running costs.

Products in the spotlight

Daikin offers now a **complete light commercial** range, optimised for seasonal efficiency!

RZQG-L Seasonal Smart		✓	✓	✓	✓	✓	✓	✓	✓
RZQSG-L Seasonal Classic		✓	✓	✓	✓	✓	✓	✓	

→ Seasonal outdoor units:

Seasonal Smart and Seasonal Classic products have been specially designed to offer a very high seasonal performance that already meets the 2014 ErP requirements.

Top efficiency:

- New compressor that offers substantial efficiency improvements.
- New control logic
 - that optimises the efficiency at the most frequently encountered operating conditions.
 - that optimises the auxiliary modes (when the unit is not active).
- Newly designed heat exchangers optimise the refrigerant flow at the most frequent operating conditions (temperature and load) by reducing the piping diameter of the heat exchanger which leads to a significant enhancement in energy efficiency.
- Additionally, these new seasonal outdoor models also offer an improved nominal performance.

→ Variable Refrigerant Temperature

Did you know that all Daikin Sky Air systems operate with variable refrigerant temperature?

In cooling mode for example the system will automatically increase its evaporating temperature (T_e) and consequently discharge temperature if the gap between the achieved indoor temperature (T_{in}) and the request indoor temperature (T_{set}) becomes smaller. This reduces the risk of cold draft and hence increases the customer comfort.

Seasonal Smart even adopts a special setting to further improve comfort & efficiency by offering the possibility to customize the boundaries of the evaporating (Te) or condensing (Tc) temperature limits. The perfect solution for those people looking for an even more comfortable indoor air climate & an even further reduction of their energy bill.

Seasonal Smart

Enhancement in efficiency and comfort thanks to selectable and variable refrigerant temperatures.

- Suits computer room applications (EDP).
- R-22/R-407C Replacement technology has been incorporated: replacement solutions deliver major energy savings, offering rapid payback and a cost-effective upgrade solution, phased for minimal downtime.
- Guarantees operation in heating mode down to -20°C.
- A 75m pipe run to achieve longer runs for installation.
- Compatibility with D-BACS – links your unit into the wider building management system.

Seasonal Classic

- R-22/R-407C Replacement technology has been incorporated: replacement solutions deliver major energy savings, offering rapid payback and a cost-effective upgrade solution, phased for minimal downtime.
- Guarantees operation in heating mode down to -15°C.
- A 50m pipe run to achieve longer runs for installation.

→ Air conditioning with smart use – User friendly remote controller BRC1E52A/B

A series of energy saving functions that can be individually selected

- Temperature range limit
- Improved setback function
- Presence & floor sensor connections (available on fully flat cassette & round flow cassette)
- Setting temperature auto reset
- Off timer
- kWh indication
- 3 weekly timers

→ Fully Flat Cassette: Design & Genius in one

Unique in the market, the fully flat cassette is a remarkable blend of iconic design and engineering excellence with an elegant white or a silver and white finish. Fitting flush within the ceiling modules and fully flat with the ceiling itself, the cassette is both stylish and unobtrusive. Superb efficiency and comfort is delivered through the combined use of floor and presence sensors and, when necessary, the individual flap control via the wired remote controller makes it simple to close one flap.

Fully integrated, fully discreet

The concept our designers had in mind was for an unobtrusive cassette that blends seamlessly with the décor of a modern office while meeting the demanding criteria of architects for total integration within a standard European ceiling panel, enabling lights, speakers and sprinklers to be installed in the adjoining ceiling tiles. The result is the fully flat cassette with its near flush fit, 4-way air distribution and special sensors to ensure the delivery of perfect comfort. Available in crystal white or crystal white and grey, the fully flat cassette is the perfect blend of design and function.

Differentiated by excellence

Sensor-driven comfort

To ensure perfect comfort the fully flat cassette is fitted with two optional sensors linked to an advanced controller.

The '**presence**' sensor detects when there are people in the room and it adjusts the temperature to the previously selected 'set point' thus establishing the perfect working conditions. When the sensor establishes that the room is empty, it can switch off the cassette so that the user is not wasting money on unnecessary heating or cooling. The sensor also adapts the direction of the airflow depending of where people are situated in the room, ensuring every individual's comfort at any time.

Because hot air rises, the natural temperature distribution in a room is for it to be warmer near the ceiling and cooler near the floor. The cassette's '**floor**' sensor detects the temperature difference and re-directs the airflow to ensure that the temperature distribution is even: cold feet are history!

Flexible solution

The need for flexible usage of space often means that temporary or permanent barriers are erected leaving the cassette close to a wall or in a corner with the resulting imbalances in airflow. Our advanced technology anticipates this and we have made it possible to use the controller to individually open or close any of the four flaps to restore optimal efficiency and to save on energy costs.

Silent comfort

The fully flat cassette is amongst the quietest units in the market and, in addition to the sensors, has various functions that are designed to enhance the user's comfort and pleasure.

Air quality

The quality of the air in the room is as important as the temperature and we have fitted advanced filters to remove dust particles to ensure the air is clean. In addition, a special programme allows the humidity levels to be reduced without variations in temperature.

Intuitive control

The fully flat cassette's advanced controller provides the user with absolute control over their work environment. From setting the desired temperature to directing the airflow, from delivering the right temperature whenever the room is in use to ensuring that cold feet are history, from reconfiguring airflow to monitoring performance, the advanced controller is simple and intuitive to use. The large display screen and on-screen instructions combined with clearly marked function buttons give users total control enabling them to quickly set their desired conditions and to focus on the job at hand.

Top efficiency year-round

As with all Daikin products, this cassette delivers exceptional seasonal efficiency while the presence sensor has been shown to reduce energy consumption by around 27%*.

By using the controller to monitor performance and energy consumption, users can reduce their environmental impact while maintaining perfect working conditions.

*estimated

→ Round Flow Cassette : setting the standard for efficiency and comfort

The round flow cassettes FCQG and FCQHG-F series are designed for use in all forms and sizes of commercial offices and retail environments and provide you with a more energy efficient model.

Even more energy efficient

- Daikin was the first to launch an **auto cleaning Standard panel**. With this panel the costs can be further reduced as the filter cleans itself automatically once a day.
- Maintenance of the filter is facilitated and so less time is required.
- Running costs are reduced compared to standard solutions: **up to 50% energy can be saved** thanks to daily filter cleaning (Wolverhampton, UK).

Auto-cleaning panel
saves up to 50% →

- The optional **presence sensor** adjusts the temperature or switches off the unit when there is nobody in the room. Up to 27% energy can be saved with this new function.
- If no presence is detected in the room for 15mins, the set temperature is changed until a minimum temperature (for heating) or maximum temperature (for cooling) is reached. When selecting the setback function, the unit will maintain the temperature within a preset minimum and maximum temperature, when there is no presence detected in the room for 1 hour.
- Newly designed **heat exchanger** (diameter pipes are reduced to 5mm instead of 7mm), DC fan motor and DC drain pump enable even more energy to be saved.

Presence sensor
saves up to 27%* →

* estimated energy saving

... and improved comfort

- The unique **360° air flow** discharge pattern ensures a uniform temperature distribution across the room without dead corners.

The comfort can be further enhanced thanks to the optional sensors:

- The presence sensor allows air flow control. It directs the air away from any person detected in the room, when the air flow control is on.
- With the **floor sensor** having cold feet becomes history. This sensor detects the average floor temperature and ensures an even temperature distribution between ceiling and floor.

Flexible installation

The round flow cassette offers higher flexibility thanks to:

- The possibility of easily closing one flap via the wired remote controller (BRC1E52A/B - optional), to suit the room configuration. Optional closure kits are available as well.

Other features

- Standard DIII-net compatibility – link your cassette into the wider building management system.
- Fresh air intake possible (max. 20%).

Daikin leads the way: Seasonal series

Daikin again leads the industry with their full light commercial range optimised for seasonal efficiency, which already meets the very challenging 2014 ErP requirements.

Our Sky Air Seasonal series – **Seasonal Smart** and **Seasonal Classic** – offer at least 20% better performance than current existing inverter solutions and this is fully in line with 20/20/20 EU policy. This performance can be further enhanced with a smart use of unique Daikin options. The technology used gives very high levels of seasonal efficiency while maintaining or improving the comfort and flexibility features that make Daikin so unique.

Daikin has a solution for all your needs:

Seasonal  **Smart**

- **Seasonal Smart** offers TOP seasonal efficiency. It meets the needs of projects requiring high flexibility such as longer piping lengths, a wider operating range or EDP applications. Efficiency and comfort can be further enhanced with selectable evaporating and condensing temperatures.

Seasonal  **Classic**

- **Seasonal Classic** offers an effective solution for applications where less flexibility is required.

Seasonal efficiency ...

Smart use of energy

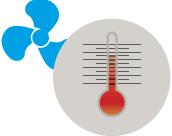

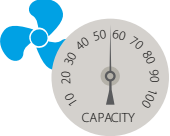

Challenging 20-20-20 environmental targets

The European Commission has set challenging targets for improving energy efficiency in the EU. These so-called 20-20-20 targets aim at a 20% reduction in CO₂ emissions, 20% share of renewable energy and a 20% reduction in the use of primary energy, all by the year 2020. To realise these objectives, Europe issued the Eco-Design Directive [2009/125/EC]. This sets minimum efficiency requirements for energy related products. After 2013, all air conditioners and air to air heat pumps under 12 kW come into scope of this Eco-Design Directive. From 2013, products unable to comply with the minimum efficiency requirement (such as non-inverter air conditioners) will lose their CE marking and thus may no longer be sold in Europe. In 2014 the energy-performance bar will again be raised significantly.

Major change: seasonal efficiency in line with real-life performance

Not only does the Eco-Design Directive systematically raise the minimum requirements with respect to environmental performance, the method used to measure this performance has also been changed to better reflect real-life conditions. Previous measurements reflected so-called nominal efficiency, a measurement of performance at one fixed outdoor temperature and with equipment running at full power. Since a cooling or heating season involves a range of outdoor temperatures (not just the one nominal temperature in the rating) and equipment is often only running at partial load, this old rating did not properly reflect actual performance.

The new method, seasonal efficiency, measures heating and cooling performance across a range of outdoor temperatures that give a better representation of actual efficiency over an entire heating or cooling season. Moreover, auxiliary modes such as stand-by mode are also taken into account in the new seasonal efficiency ratings. Thus seasonal efficiency gives a much better representation of the real performance of an air conditioner, in real-life conditions, across an entire season.

		
Temperature	Capacity	Auxiliary modes
NOMINAL	NOMINAL	NOMINAL
1 Temperature condition: 35°C for cooling 7°C for heating	Does not reflect partial capacity	Does not take auxiliary power modes into account
Does not often occur in reality	Benefits of inverter technology not visible	
SEASONAL	SEASONAL	SEASONAL
Several rating temperatures for cooling and heating, reflecting actual performance over an entire season	Integrates operation at partial instead of full capacity Benefits of inverter technology are shown	Includes consumption auxiliary modes: <ul style="list-style-type: none">• Thermostat off• Standby mode• OFF mode• Crankcase heater

Nominal efficiency gives an indication on how efficient an air conditioner is when operating in a nominal condition.

Seasonal efficiency gives an indication on how efficient an air conditioner is when operating over an entire cooling or heating season.

Europe's new energy label: raising the bar on energy efficiency

To inform consumers concerning these new energy performance standards, Europe is also introducing a new energy label. The present European energy label, introduced in 1992, has had its effect. Consumers are able to compare and make purchasing decisions based on uniform labelling criteria. The new label that will come into force on 1 January 2013 will allow end-users to make even better informed choices, since seasonal efficiency reflects air conditioner efficiency over an entire season.

The new energy label includes multiple classifications from A+++ to D reflected in colour shadings ranging from dark green (most energy efficient) to red (least efficient). Information on the new label includes not only the new seasonal efficiency ratings for heating (SCOP) and cooling (SEER), but also annual energy consumption and sound levels.

Daikin leading the way to seasonal efficiency

While the challenges of Eco-Design are immense, Daikin has resolutely chosen for early implementation of this new legislation. Already in 2010, Daikin launched a new light commercial range fully optimised for seasonal efficiency. The Seasonal Smart series in this range in fact already complies with the very challenging 2014 minimum requirements. Today Daikin is proud to indicate the seasonal performance of its entire residential and light commercial range up to 12 kW.

RXS35K

BRC1E52A/B BRC7F532F

- › The round flow cassette provides a more comfortable environment and offers greater savings in energy consumption to shop, office and restaurant owners
- › 360° air discharge ensures uniform air flow and temperature distribution
- › Modern style decoration panel is available in 3 different variations: pure white (RAL9010) auto cleaning panel, pure white (RAL9010) standard panel with grey louvers and pure white (RAL9010) standard panel with white louvers
- › Daikin introduces first auto cleaning cassette to European market.
- › Higher efficiency and comfort thanks to daily auto cleaning of the filter.
- › Lower maintenance costs thanks to auto cleaning function.
- › Easy dust removal with vacuum cleaner without opening the unit.
- › The presence sensor (optional) : adjusts the temperature or switches off the unit when there is nobody in the room - ensures the air flow is directed away from any person detected in the room, when the air flow control is activated
- › The floor sensor (optional) detects the average floor temperature and ensures even temperature distribution between ceiling and floor. Cold feet will become history.
- › Individual flap control: one flap can be easily closed via the wired remote controller (BRC1E52) in case you would refurbish or rearrange your interior
- › Fresh air intake: up to 20 %
- › No optional adapter needed for DIII-connection, link your unit into the wider building management system.

- Unique design in the market: integrates fully flat into the ceiling and fits flush into architectural ceiling modules
- Remarkable blend of iconic design and engineering excellence with an elegant finish in white or a combination of silver and white
- The presence sensor (optional) adjusts the set point with standard 1°C if no one is detected in the room, it is possible to adjust the set point with 2, 3 or 4°C (optional). It also automatically directs air flow away from any person to avoid draught.
- The floor sensor (optional) detects the average floor temperature and ensures even temperature distribution between ceiling and floor. Cold feet will become history.
- Individual flap control: one flap can be easily closed via the wired remote controller (BRC1E52) in case you would refurbish or rearrange your interior
- Low energy consumption thanks to specially developed small tube heat exchanger, DC fan motor and drain pump
- Fresh air intake for healthy living
- No optional adapter needed for DIII-connection, link your unit into the wider building management system.

FDBQ25B

BRC1E52A/B

- › Designed for hotel bedrooms
- › Blends unobtrusively with any interior décor: only the suction and discharge grilles are visible
- › Compact dimensions (230mm high & 652mm deep), can easily be mounted in a ceiling void
- › Whisper quiet operation: down to 28dBA sound pressure level
- › The air suction direction can be altered from rear to bottom suction

SEASONAL EFFICIENCY
Smart use of energy

- › Blends unobtrusively with any interior décor: only the suction and discharge grilles are visible
- › Easy installation thanks to automatic air flow adjustment towards nominal air flow rate
- › Reduction in power consumption thanks to DC inverter fans
- › Improved comfort thanks to 3-step air flow control
- › Up to 200Pa external static pressure allows extensive ductwork runs and flexible application: ideal for use in large areas
- › Less duct calculations are needed; moreover, the air flow can be adjusted during installation via the wired remote control (optional) instead of via channel adjustments
- › No optional adapter needed for DIII-connection, link your unit into the wider building management system.
- › The air suction direction can be altered from rear to bottom suction
- › Standard drain pump with 625mm lift

- › Ideal solution for commercial spaces with no or narrow false ceilings
- › The unit can easily be mounted in corners and narrow spaces, as it only needs 30mm lateral service space
- › Low energy consumption thanks to DC fan motor and drain pump
- › Stylish unit blends easily with any interior, as the flaps close entirely when not in operation
- › Can be installed in both new and existing buildings
- › Wider air discharge thanks to Coanda effect: up to 100°

- › Air flow distribution for ceiling heights up to 3.8m without capacity loss
- › No optional adapter needed for DIII-connection, link your unit into the wider building management system.

SEASONAL EFFICIENCY
Smart use of energy

- > Ideal solution for commercial spaces with no or narrow false ceiling
- > The unit can easily be mounted in corners and narrow spaces, as it only needs 30mm lateral service space
- > Low energy consumption thanks to DC fan motor and drain pump
- > Stylish unit blends easily with any interior, as the flaps close entirely when not in operation
- > Can be installed in both new and existing buildings
- > Wider air discharge thanks to Coanda effect: up to 100°

- > Air flow distribution for ceiling heights up to 3.8m without capacity loss
- > No optional adapter needed for DIII-connection, link your unit into the wider building management system.

SEASONAL EFFICIENCY
Smart use of energy

- › Ideal solution for commercial spaces with no or narrow false ceilings
- › Low energy consumption thanks to specially developed small tube heat exchanger, DC fan motor and drain pump
- › Stylish unit blends easily with any interior, as the flaps close entirely when not in operation
- › Improved comfort thanks to automatic air flow adjustment to required load
- › Individual flap control: one flap can be easily closed via the wired remote controller (BRC1E52) in case you would refurbish or rearrange your interior
- › Can be installed in both new and existing buildings
- › Same outlook for all models (unified dimensions)
- › Auto swing function ensures efficient air and temperature distribution
- › Air can be discharged in 5 different angles between 0 and 60°

- › Possibility to shut 1 or 2 flaps for easy installation in corners

- › Air flow distribution for ceiling heights up to 3.5m without capacity loss
- › No optional adapter needed for DIII-connection, link your unit into the wider building management system.

- > Wide range from 2 to 5 port units
- > Possibility to connect up to 5 indoor units
- > 3-port 40 multi outdoor unit gives an answer to lower capacity requirements of better insulated houses. The 15-class wall mounted allows efficient distribution of the lower capacity of the multi outdoor unit.
- > All indoor units can be individually controlled and do not need to be installed in the same room or even at the same time
- > Outdoor units are fitted with a Daikin swing compressor renowned for its low noise and high energy efficiency
- > Possibility to combine different types of indoor units: wall mounted, floor standing, concealed ceiling, ceiling suspended units, round flow or 4-way blow cassettes

- › Energy efficient heating system based on air source heat pump technology
- › Low energy bills and low CO₂ emissions
- › Possibility to connect up to 9 indoor units
- › All indoor units can be individually controlled and do not need to be installed in the same room or even at the same time
- › Possibility to combine different types of indoor units: wall mounted, floor standing, concealed ceiling, ceiling suspended units, round flow or 4-way blow cassettes
- › Slim design for flexible installation
- › 3 steps in night quiet mode: step 1: 47dBA, step 2: 44 dBA, step 3: 41 dBA
- › Easy installation thanks to automatic refrigerant charging operation, automatic test operation
- › Possibility to limit peak power consumption between 30 and 80%, for example during periods with high power demand

CYQM150DK80FSN

- › Connectable to ERQ heat pump
- › ERQ is among the first DX system suitable for connection to air curtains
- › Free-hanging model (F): easy wall mounted installation
- › A payback period of less then 1.5 years compared to installing an electric air curtain
- › Easy and quick to install at reduced costs since no additional water sytems, boilers and gas connections are required
- › Maximum energy efficiency stemming from almost zero down flow turbulence, optimised air flow and the application of advanced discharge rectifier technology
- › Around 85% air separation efficiency, greatly reducing both heat loss and required indoor unit heating capacity

 (1) Favourable condition | (2) Normal condition | (3) Unfavourable condition

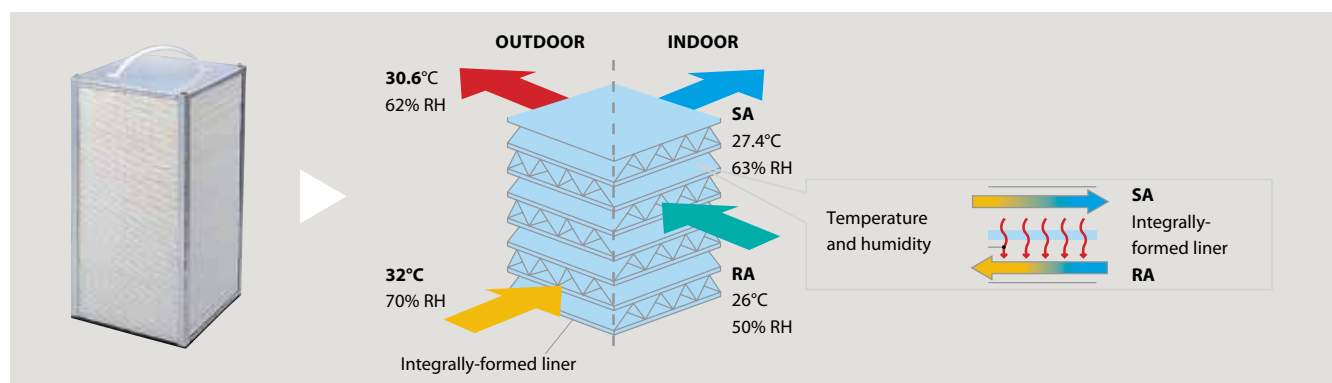

The Daikin heat reclaim ventilation system modulates the temperature and humidity of incoming fresh air to match indoor conditions. A balance is thus achieved between indoor and outdoor ambients, enabling the cooling or heating load placed on the air conditioning system to be reduced significantly. HRV units can be controlled individually or integral with the air conditioning system (Daikin VRV or Sky Air series).

- › Energy saving ventilation using indoor heating, cooling and moisture recovery
- › Ideal solution for shops, restaurants or offices requiring maximum floor space for furniture, decorations and fittings
- › Free cooling when outdoor temperature is below indoor temperature (eg. during night time)
- › Low energy consumption thanks to DC fan motor on 350 to 2000 units
- › Prevent energy losses from over-ventilation while maintaining indoor air quality with optional CO₂ sensor
- › Can be used as stand alone or integrated in the Sky Air or VRV system
- › Wide range of units: air flow rate from 150 up to 2,000 m³/h
- › Optional medium and fine dust filters M6, F7, F8 to meet customer request or legislation
- › Shorter installation time thanks to easy adjustment of nominal air flow rate, so less need for dampers compared with traditional installations
- › Specially developed heat exchange element with High Efficiency Paper (HEP)
- › No drain piping needed
- › Can operate in over- and under pressure
- › Total solution for fresh air with Daikin supply of both VAM and electrical heater

Total solution for fresh air with Daikin supply of both VAM and electrical heaters

- › Increased comfort in low outdoor temperature thanks to the heated outdoor air
- › Integrated electrical heater concept (no additional accessories required)
- › Standard dual flow and temperature sensor
- › Flexible setting with adjustable setpoint
- › Increased safety with 2 cut-outs: manual & automatic
- › BMS integration thanks to:
 - Volt free relay for error indication
 - 0-10VDC input for setpoint control
- › Capacities ranging from 1 to 2.5 kW

Daikin Air handling units

For small to large commercial spaces Daikin offers a range of R-410A inverter condensing units for use in conjunction with air handling units. In situations where Daikin commercial range ventilation units cannot satisfy the ventilation requirement due to building constraints (large atriums, banquet halls etc), air handling units represent the ideal solution. Air handling units provide large fresh air volumes (> 1,000 m³/h) and high ESPs enabling the use of extensive ductwork runs.

An air handler or air handling unit provides a tailor-made solution for optimising air conditions throughout multiple spaces. An air handler can be customised to your building - with no installation restrictions or design limitations - as air handler units are based on a completely unique modular design, so they can be sized (in increments of 1cm) to your exact requirements.

WIDE RANGE OF AIR FLOWS

Daikin's wide range of air handling systems handle air flow rates from 500 m³/h up to 140,000 m³/h. The air handler unit can be adapted to deliver whatever air flow you require, via the specific dimensions of flow section available at the installation.

RETURN ON INVESTMENT

The air handling unit (AHU) is critical to an effective climate control system and, although the initial investment can appear high, the savings generated by our advanced designs and operating efficiencies guarantee a rapid return on the investment made. Our AHU Energy series has been designed to deliver exceptional performance thus driving down the energy consumed and so lowering energy bills. Taken over the expected 15-year life-span of the equipment, this will result in a substantial saving, especially in a time of ever increasing energy prices.

PRE-DEFINED SIZES

27 fixed sizes are available, optimized to reach the best compromise between competitiveness and manufacturing standardisation. However, Daikin's section by section design means that units can be sized by 1 cm increments and assembled on site, without welding, to suit the space constraints of the installation.

HIGH EFFICIENCY COMPONENTS

All Daikin air handlers have been designed for optimum energy efficiency. Polyurethane or Mineral wool panels guarantee excellent thermal insulation performance. Filters are provided with a large choice of efficiency filtration class.

DAIKIN FRESH AIR PACKAGE

The "Daikin Fresh Air Package" provides a complete Plug & Play Solution including AHU, ERQ or VRV Condensing Unit and all unit control (EKEQ, EKEX, DDC controller) factory mounted and configured. The easiest solution with only one point of contact.

ASTRA is the powerful software that Daikin has developed to offer a quick and comprehensive service for the customer in order to make the technical choice and the economic valorization of each AHU. It is a complete tool that can configure any type of product and respond exactly to the strictest design needs. The result is a comprehensive economic offer including all the technical data and drawings, the psychrometric diagram with the relative air treatment and the fans' performance curves.

The ASTRA software features a specific DX heat pump coil section able to calculate cooling and heating performances with the automatic selection of the appropriate Daikin expansion valve.

Why use ERQ for connection to air handling units?

HIGH EFFICIENCY

Daikin heat pumps are renowned for their high energy efficiency with COPs up to 4.56 in heating¹.

¹ ERQ100AV1 heat pump

HIGH COMFORT LEVELS

Daikin ERQ units respond rapidly to fluctuations in the supply air temperature, resulting in a steady indoor temperature, together with the dehumidification this results in high comfort levels for the end user.

EASY DESIGN AND INSTALLATION

The system is easy to design and install since no additional water systems such as boilers, tanks and gas connections etc are required. This also reduces the total system cost.

Flexible control options

IN ORDER TO MAXIMIZE INSTALLATION FLEXIBILITY,
3 TYPES OF CONTROL SYSTEMS ARE OFFERED.

Control x:

Control of air temperature (discharge temperature, suction temperature, room temperature) via external device (DDC controller)

Control y:

Control of evaporating temperature via Daikin control (no DDC controller needed)

Control z:

Control of air temperature (suction temperature, room temperature) via Daikin control (no DDC controller needed)

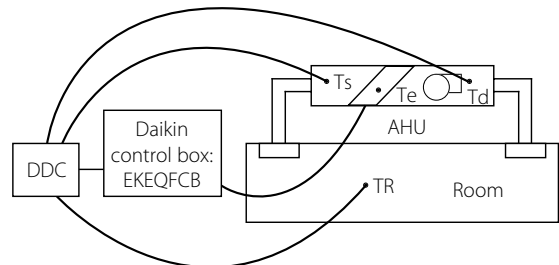

Control possibilities for air handling applications

In order to maximise installation flexibility, 3 types of control systems are offered:

POSSIBILITY X (TD/TR CONTROL):

Air temperature control via DDC controller

Room temperature is controlled as a function of the air handling unit suction or discharge air (customer selection). The DDC controller is translating the temperature difference between set point and air suction temperature (or air discharge temperature or room temperature) into a reference voltage (0-10V) which is transferred to the Daikin control box (EKEQFCBA). This reference voltage will be used as the main input value for the compressor frequency control.

POSSIBILITY Y (TE/TC CONTROL):

By fixed evaporating temperature

A fixed target evaporating temperature of between 3°C and 8°C can be set by the customer. In this case, room temperature is only indirectly controlled. The cooling load is determined from the actual evaporating temperature (i.e. load to the heat exchanger). A Daikin wired remote controller (BRC1D52 or BRC1E52A/B - optional) can be connected for error indication.

POSSIBILITY Z (TS/TR CONTROL):

Using Daikin wired remote controller (BRC1D52 or BRC1E52A/B - optional)

Set point can be fixed via standard Daikin wired remote controller. Remote ON/OFF can be achieved by an optional adapter KRP4A51.

No external DDC controller should be connected. The cooling load is determined from the air suction temperature and set point on the Daikin controller.

Ts = Air suction temperature
Td = Air discharge temperature
Tr = Room temperature
Te = Evaporating temperature
AHU = Air Handling Unit
DDC = Digital Display Controller

	OPTION KIT	FEATURES
Possibility x	EKEQFCB	DDC controller is required Temperature control using air suction or air discharge temperature
Possibility y		Using fixed evaporating temperature, no set point can be set using remote controller
Possibility z	EKEQDCB EKEQMCB*	Using Daikin wired remote controller BRC1D52 or BRC1E52A/B Temperature control using air suction temperature

* EKEQMCB (for 'multi' application)

A range of R-410A inverter condensing units for pair application with air handling units.

- › Inverter controlled units
- › Large capacity range (from 100 to 250 class)
- › Heat pump
- › R-410A
- › Wide range of expansion valve kits available
- › Up to 5 ERQ units can be connected to an interlaced coil in one air handling unit

The “Daikin Fresh Air Package” provides a complete Plug & Play Solution including AHU, ERQ or VRV Condensing Unit and all unit control (EKEQ, EKEX, DDC controller) factory mounted and configured. The easiest solution with only one point of contact.

Wired remote control

- › Schedule timer:
 - Five day actions can be set as follows:
 - set point: unit is switched ON and normal operation is maintained
 - OFF: unit is switched OFF¹
 - limits: unit is switched ON and min./max. control (cf. limit operation for more details)
- › Home leave (frost protection): during absence, the indoor temperature can be maintained at a certain level. This function can also switch the unit ON/OFF
- › User friendly HRV function, thanks to the introduction of a button for ventilation mode and fan speed
- › Constantly monitoring of the system for malfunctions in a total of 80 components
- › Immediate display of fault location and condition
- › Reduction of maintenance time and costs

Display

- › Operating mode¹
- › Heat Recovery Ventilation (HRV) in operation
- › Cool / heat changeover control
- › Centralised control indication
- › Group control indication
- › Set temperature¹
- › Air flow direction¹
- › Programmed time
- › Inspection test / operation
- › Fan speed¹
- › Clean air filter
- › Defrost / hot start
- › Malfunction

¹ Only functions marked with '1' are available on BRC944B2

ARC4*/BRC4*/BRC7*

Infrared remote control

Operation buttons: ON/OFF, timer mode start/stop, timer mode on /off, programme time, temperature setting, air flow direction (1), operating mode, fan speed control, filter sign reset (2), inspection (2)/ test indication (2)

Display: Operating mode, battery change, set temperature, air flow direction (1), programmed time, fan speed, inspection/test operation (2)

1. Not applicable for FXDQ, FXSQ, FXNQ, FBDQ, FDXS, FBQ
2. For FX** units only
3. For all features of the remote control, refer to the operation manual

Save energy

A series of energy saving functions that can be individually selected

- > Temperature range limit
- > Setback function
- > Presence & floor sensor connection (available on new round flow cassette)
- > kWh indication
- > Set temperature auto reset
- > Off timer

Temperature range limit avoids excessive heating or cooling

Save energy by constraining the lower temperature limit in cooling and upper temperature limit in heating mode.

note : Also available in auto cooling/heating change over mode.

kWh indication keeps track of your consumption

The kWh indication shows an indicative electricity consumption of the last day/month/year.

Other functions

- > Up to 3 independent schedules can be set, so the user can easily change the schedule himself throughout the year (e.g. Summer, winter, mid-season)
- > Possibility to individually restrict menu functions
Easy to use: all main functions directly accessible
- > Easy setup: clear graphical user interface for advanced menu settings
- > Real time clock with auto update to daylight saving time
- > Built-in backup power: when a power failure occurs all settings remain stored up to 48 hours
- > Supports multiple languages
 - English, German, Dutch, Spanish, Italian, Portuguese, French, Greek, Russian, Turkish, Polish (BRC1E52A)
 - English, German, Czech, Croatian, Hungarian, Romanian, Slovenian, Bulgarian, Slovak, Serbian, Albanian (BRC1E52B)

Graphical display of indicative electricity consumption

Overview of controllers for Siesta Sky Air

Siesta Sky Air indoor units	Controllers

Specifications

Dimensions (length x width x height) ARCWB: 0.15 m x 0.21 m x 0.04 m.

ARCWB comes standard with a 10 meter wire, which can be extended to maximum wire length of 15 meter. For reference: ARCWA comes standard with a 10 meter **wire**, which cannot be extended.

ARCWB & ARCWA can only control **one indoor unit** at a time; group control is only possible when using option R04084124324.

Integration of RA, Sky Air, VRV and AHU in BMS or home automation systems

RTD-RA

- › Modbus interface for monitoring and control of residential indoor units

RTD-NET

- › Modbus interface for monitoring and control of Sky Air, VRV, VAM and VKM

RTD-10

- › Advanced integration into BMS of Sky Air, VRV, VAM and VKM through either:
 - Modbus
 - Voltage (0-10V)
 - Resistance
- › Duty/standby function for server rooms

RTD-20

- › Advanced control of Sky Air, VRV, VAM/VKM and air curtains
- › Clone or independent zone control
- › Increased comfort with integration of CO₂ sensor for fresh air volume control
- › Save on running costs via
 - pre/post and trade mode
 - set point limitation
 - overall shut down
 - PIR sensor for adaptive deadband

RTD-HO

- › Modbus interface for monitoring and control of Sky Air, VRV, VAM and VKM
- › Intelligent hotel room controller

Centralised control systems

DCS302C51

DCS301B51

DST301B51

Centralised control of the Sky Air system can be achieved via 3 user friendly compact controls: centralised remote control, unified on/off control and schedule timer. These controls may be used independently or in combination where 1 group = several (up to 16) indoor units in combination and 1 zone = several groups in combination.

A centralised remote control is ideal for use in tenanted commercial buildings subject to random occupation, enabling indoor units to be classified in groups per tenant (zoning).

The schedule timer programmes the schedule and operation conditions for each tenant and the control can easily be reset according to varying requirements.

DCS302C51

Centralised remote control

Providing individual control of 64 groups (zones) of indoor units.

- a maximum of 64 groups (128 indoor units, max. 10 outdoor units) can be controlled
- a maximum of 128 groups (128 indoor units, max. 10 outdoor units) can be controlled via 2 centralised remote controls in separate locations
- zone control
- group control
- malfunction code display
- maximum wiring length of 1,000m (total: 2,000m)
- expanded timer function

DCS301B51

Unified ON/OFF control

Providing simultaneous and individual control of 16 groups of indoor units.

- a maximum of 16 groups (128 indoor units) can be controlled
- 2 remote controls in separate locations can be used
- operating status indication (normal operation, alarm)
- centralised control indication
- maximum wiring length of 1,000m (total: 2,000m)

DST301B51

Schedule timer

Enabling 64 groups to be programmed.

- a maximum of 128 indoor units can be controlled
- 8 types of weekly schedule
- a maximum of 48 hours back up power supply
- a maximum wiring length of 1,000m (total: 2,000m)

Basic solution for control of Sky Air and VRV

- › Rotation function
- › Backup operation function.

DCS601C51

Detailed & easy monitoring and operation of VRV systems (max. 64 indoor units groups).

Languages

- › English
- › French
- › German
- › Italian
- › Spanish
- › Dutch
- › Portuguese

System layout

- › Up to 64 indoor units can be controlled
- › Touch panel (full colour LCD via icon display)

Management

- › Easy management of electricity consumption
- › Enhanced history function

Control

- › Individual control (set point, start/stop, fan speed) (max. 64 groups/indoor units)
- › Set back schedule
- › Enhanced scheduling function (8 schedules, 17 patterns)
- › Flexible grouping in zones
- › Yearly schedule
- › Fire emergency stop control
- › Interlocking control
- › Increased HRV monitoring and control function
- › Automatic cooling / heating change-over
- › Heating optimization
- › Temperature limit
- › Password security: 3 levels (general, administration & service)

- › Quick selection and full control
- › Simple navigation

Monitoring

- › Visualisation via Graphical User Interface (GUI)
- › Icon colour display change function
- › Indoor units operation mode
- › Indication filter replacement
- › Multi PC

Cost performance

- › Free cooling function
- › Labour saving
- › Easy installation
- › Compact design: limited installation space
- › Overall energy saving

Open interface

- › Communication to any third party controller (domotics, BMS, etc.) is possible via open interface (http option)

Connectable to

- › VRV
- › HRV
- › Sky Air (via interface adapter)
- › Split (via interface adapter)

A man in a grey suit and blue shirt is sitting at a light-colored desk in a modern office. He is looking off to the side with a thoughtful expression, holding a pen to his chin. A silver laptop is open in front of him, and a smartphone is on the desk to his left. The background features a dark wall and large windows.

Up to 2,560 groups

HUB

The diagram illustrates the Intelligent Manager DCM601A51 system architecture. At the center is the DCM601A51 unit, which can be configured with an optional internal modem. It connects to an Air Conditioning Network Service System via a Phone line. For network connectivity, it supports LAN, Internet Intranet, and USB memory. The system is designed for remote monitoring and control, featuring a Web Access interface and a multifunction report by E-Mail. It interfaces with various building systems: a DIII-NET line for VRV IV indoor units (up to 64 groups) and an HRV; an iTM plus adaptor line for DCM601A52 units (up to 7 adapters) connected via Di/Pi ports; and a WAGO interface for I/O modules controlling Lighting, Pump, Fan, and Sensor. Additionally, it monitors Fire alarm and kWh meter status.

User friendliness

- › Intuitive user interface
- › Visual lay out view and direct access to indoor unit main functions
- › All functions direct accessible via touch screen or via web interface

Smart energy management

Smart energy management tools enable monitoring if energy use is according to plan and help detect origins of energy waste, thus maximizing efficiency

Flexibility

- › In size: modular design for use in small to large applications
- › In integration: from simple A/C control to small BMS control of lighting, pumps, ... via WAGO I/O

Easy servicing and commissioning

Perform the refrigerant containment check remotely and when it is most convenient for you and so prevent an on site visit. At the same time, increase your customer satisfaction because there is no disruption to the air conditioning during business hours.

Functions overview

DCM601A51

System layout

- › Up to 2,560 unit groups can be controlled
(ITM plus Integrator + 7 iPU
(incl. iTM adaptor)
- › Ethernet TCP/IP

WAGO Interface

- › Modular integration of 3rd party equipment
 - WAGO coupler (interface between WAGO and Modbus)
 - Di module
 - Do module
 - Ai module
 - Thermistor module

Management

- › Web access
- › Power Proportional Distribution (option)
- › Operational history (malfunctions, operation hours, ...)
- › Smart energy management
 - monitor if energy use is according to plan
 - detect origins of energy waste
- › Setback function
- › Sliding temperature

Control

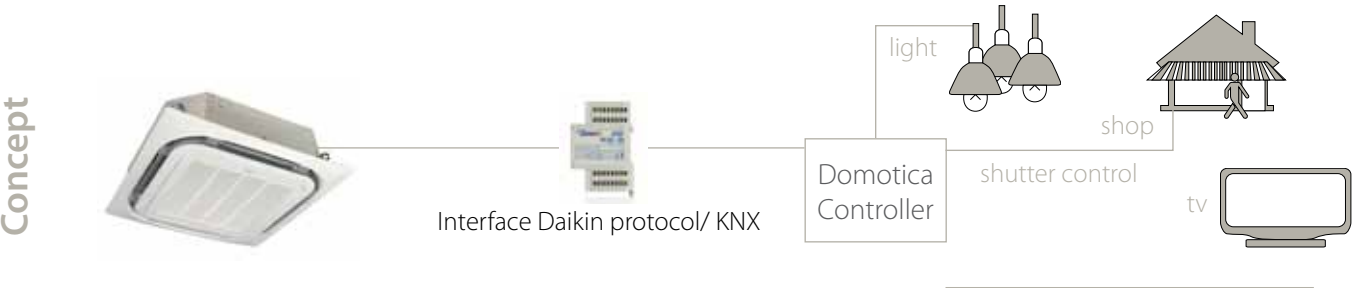

- › Individual control (2,560 groups)

Integration of Sky Air and VRV in HA/BMS systems

Connect Sky Air / VRV indoor units to KNX interface for BMS integration

KNX interface line-up

The integration of Daikin indoor units through the KNX interface allows monitoring and control of several devices, such as lights and shutters, from one central controller. One particularly important feature is the ability to programme a 'scenario' - such as "Home leave" - in which the end-user selects a range of commands to be executed simultaneously once the scenario is selected. For instance in "Home leave", the air conditioner is off, the lights are turned off, the shutters are closed and the alarm is on.

KNX interface for

Standard protocol interfaces

BACnet Interface

Integrated control system for seamless connection between VRV and BMS systems

- › PPDdata is available on BMS system
- › Interface for BMS system
- › Communication via BACnet protocol (connection via Ethernet)
- › 256 units connectable per BACnet gateway
- › Unlimited sitesize
- › Easy and fast installation

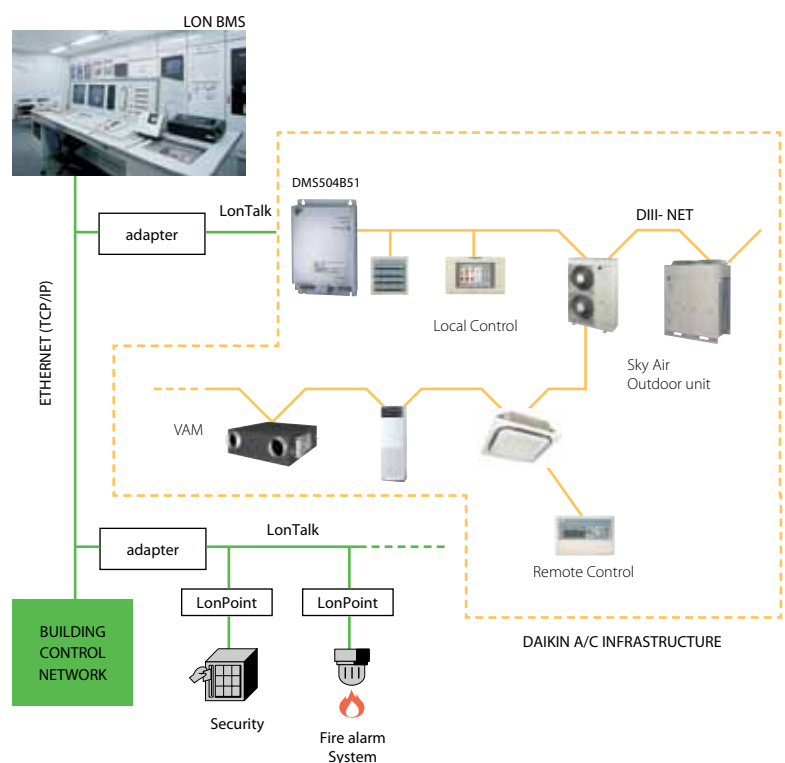

Standard protocol interfaces

LonWorks Interface

Open w integration of VRV monitoring and control functions into LonWorks networks

- › Interface for Lon connection to LonWorks networks
- › Communication via Lon protocol (twisted pair wire)
- › 64 units connectable per DMS-IF
- › Unlimited sitesize
- › Quick and easy installation

Flexible and easy installation

- › Accurate temperature measurement thanks to flexible placement of the sensor
- › No need for wiring
- › No need to drill holes
- › Ideal for refurbishment

Weight	g	300
Length of branch wiring	m	12

Other integration devices

Adapter PCB's – Simple solutions for unique requirements

Daikin's adapter PCB's provide simple solutions for unique requirements. They are a low cost option to satisfy simple control requirements and can be used on single or multiple units.

	(E)KRP1B* adapter for wiring	<ul style="list-style-type: none">› Facilitates integration of auxiliary heating apparatus, humidifiers, fans, damper› Powered by and installed at the indoor unit
	KRP2A*/ KRP4A* Wiring adapter for electrical appendices	<ul style="list-style-type: none">› Remotely start and stop up to 16 indoor units (1 group) (KRP2A* via P1 P2)› Remotely start and stop up to 128 indoor units (64 groups) (KRP4A* via F1 F2)› Alarm indication/ fire shut down› Remote temperature setpoint adjustment

Concept and benefits

- › Low cost option to satisfy simple control requirements
- › Deployed on single or multiple units

Notes

(1) Installation box for adapter PCB is necessary

(2) Interface adapter for Sky Air series (DTA112B51) is necessary

(3) Including following languages: English, German, French, Italian, Spanish, Dutch, Greek, Russian, Turkish, Portuguese, Polish

(4) Including following languages: English, German, Czech, Croatian, Hungarian, Romanian, Slovenian, Bulgarian, Slovak, Serbian, Albanian.

(5) Option not available in combination with BYCQ140*G

(6) Installation box for adapter PCB (KRP1B101) is necessary

(7) Electrical heater, humidifier and hour meter are field supply. These parts should not be installed inside the equipment.

(8) Sensing function is not available

(9) Independently controllable flaps function is not available

Power supply

V1 = 1~, 220-240V, 50Hz

VE = 1~, 220-240V/220V, 50Hz/60Hz*

W1 = 3N~, 400V, 50Hz

* For VE power supply only 1~, 220-240V, 50Hz data is displayed in this catalogue.

Measuring conditions

Air conditioning

1) nominal cooling capacities are based on:	
Indoor temperature	27°CDB/19°CWB
Outdoor temperature	35°CDB
Refrigerant piping length	7.5m
Level difference	0m
2) nominal heating capacities are based on:	
Indoor temperature	20°CDB
Outdoor temperature	7°CDB/6°CWB
Refrigerant piping length	7.5m
Level difference	0m

The sound pressure level is measured via a microphone at a certain distance from the unit. It is a relative value, depending on the distance and acoustic environment (for measuring conditions: please refer to the technical databooks). The sound power level is an absolute value indicating the "power" which a sound source generates. For more detailed information please consult our technical databooks.

Benefits

We care icons

Seasonal efficiency, smart use of energy

Seasonal efficiency gives a more realistic indication on how efficient air conditioners operate over an entire heating or cooling season.

Inverter technology

In combination with inverter controlled outdoor units

Home leave operation

During absence, the indoor temperature can be maintained at a certain level.

Auto-cleaning panel

The filter in the auto-cleaning decoration panel automatically cleans itself once per day. Simplicity of upkeep means optimum energy efficiency and maximum comfort without the need for expensive or time-consuming maintenance.

Fan only

The air conditioner can be used as fan, blowing air without cooling or heating.

Humidity control

Dry programme

Allows humidity levels to be reduced without variations in room temperature.

Remote control & timer

Weekly timer

Timer can be set to start heating or cooling anytime on a daily or weekly basis

Infrared remote control

Infrared remote control with LCD to start, stop and regulate the air conditioner from a distance.

Wired remote control

Wired remote control to start, stop and regulate the air conditioner from a distance.

Centralised control

Centralised control to start, stop and regulate several air conditioners from one central point.

Air treatment

Air filter

Removes airborne dust particles to ensure a steady supply of clean air.

Comfort

Draught prevention

When starting to warm up or when the thermostat is off, the air discharge direction is set horizontally and the fan to low speed, to prevent draught. After warming up, air discharge and fan speed are set as desired.

Auto cooling-heating changeover

Automatically selects cooling or heating mode to achieve the set temperature (heat pump types only).

Whisper quiet

Daikin indoor units are whisper quiet. Also the outdoor units are guaranteed not to disturb the quiet of the neighbourhood.

Air flow

Ceiling soiling prevention

A special function prevents air blowing out too long in horizontal position, to prevent ceiling stains.

Vertical auto swing

Possibility to select automatic vertical moving of the air discharge louver, for uniform air flow and temperature distribution.

Fan speed steps

Allows to select up to the given number of fan speed.

Other functions

Auto-restart

The unit restarts automatically at the original settings after power failure.

Twin/triple/double twin application

2, 3 or 4 indoor units can be connected to only 1 outdoor unit even if they have different capacities. All indoor units operate within the same mode (cooling or heating) from one remote control.

VRV for residential application

Up to 9 indoor units (even different capacities and up to 71 class) can be connected to a single outdoor unit. All indoor units can individually be operated within the same mode.

Self-diagnosis

Simplifies maintenance by indicating system faults or operating anomalies.

Multi model application

Up to 5 indoor units (even different capacities) can be connected to a single outdoor unit. All indoor units can individually be operated within the same mode.

Drain pump kit

Facilitates condensation draining from the indoor unit.

Notes

Seasonal efficiency, smart use of energy

SEASONAL EFFICIENCY Find out more on www.daikin.eu
Smart use of energy

Seasonal efficiency is a measure mandated by the European Union to optimise energy consumption. The EU wants to make people aware of what units are consuming and ban non-efficient products from the market. Seasonal efficient units reflect the actual performance you can expect over an entire heating and cooling season. The standard comes into force from January 2013 onwards for products under 12 kW.

Today, Daikin is leading the way towards more efficient and cost-effective comfort solutions. All Daikin products – residential and commercial as well as industrial – are seasonal efficient, they all reduce energy and costs in a smart way.
